## Constructed Response Assessment

### Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

A large rectangular box for writing the answer. In the top-left corner, there is a small icon of a hand holding a pencil.

## Constructed Response Assessment

### Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

A large rectangular box for writing the answer to question b. In the top-left corner, there is a small icon of a hand holding a pencil.

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

A large rectangular box for writing the answer to question c. In the top-left corner, there is a small icon of a hand holding a pencil.

## Scoring Guide

### The CCSS for Mathematical Content (2 points)

7.EE.A1 Writes a second expression that can be used to determine the area and shows using properties of operations that the two expressions are equivalent. \_\_\_\_\_

**(1 Point)**

7.EE.B4a Determines the side length of the dark square in part c. Students may do this by: \_\_\_\_\_

- solving an algebraic equation of the form  $b = \frac{1}{4}(52 - 4)$  or an equivalent equation using algebraic methods; or
- solving an algebraic equation using a table (algebraic equation may not be explicitly stated); or
- evaluating an arithmetic expression of the form  $\frac{(52 - 4)}{4}$

May use an incorrect expression generated from part b.

**(1 Point)**

### The CCSS for Mathematical Practice (3 points)

MP1 Completes all parts of the problem, making sense of the problem by interpreting the diagrams. \_\_\_\_\_

**(1 Point)**

(MP1: Make sense of problems and persevere in solving them.)

MP6 Uses precise calculations in determining the side length of the dark square in part c. \_\_\_\_\_

**(1 Point)**

(MP6: Attend to precision.)

MP8 Looks for and uses a pattern to write a rule to describe the relationship between the side length of the dark square and the number of white tiles in the border in part b. \_\_\_\_\_

Students may do this by:

- explaining that the number of white tiles is four times the side length of the dark squares plus four additional tiles, or providing a similar description based on an alternate visualization of the diagram; or
- writing the equation  $w = 4n + 4$  or an equivalent expression where  $w$  represents the number of white tiles and  $n$  represents the side length of the dark square.

**(1 Point)**

(MP8: Look for and express regularity in repeated reasoning.)

**TOTAL POINTS: 5**

## The CCSS for Mathematical Content Addressed In This Task

### Extend understanding of fraction equivalence and ordering.

7.EE.A1 Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.

### Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.

7.EE.B4a Solve word problems leading to equations of the form  $px + q = r$  and  $p(x + q) = r$ , where  $p$ ,  $q$ , and  $r$  are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach. *For example, the perimeter of a rectangle is 54 cm. Its length is 6 cm. What is its width?*

### The CCSS for Mathematical Practice\*

1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

\* Gray type indicates Mathematical Practices not addressed in this assessment.

# A-1a

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

Diagram labels:  $x$ ,  $4$ ,  $3$ ,  $3x$ ,  $3$ ,  $x$ ,  $3x$ ,  $3$ ,  $42$ ,  $6x$

Algebraic work:

$$3(2x + 6) + 24$$

$$6x + 18 + 24$$

$$6x + 42$$

Equivalent

$$6x + 42 = 3(2x + 6) + 24$$

WORK to the left

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

Handwritten work for part b:

$① 9 - 1 = 8$   
 $② 16 - 4 = 12$   
 $③ 25 - 9 = 16$

Area of square

$a - n^2 = \# \text{ of white tiles}$   
 (where  $a$  is the area of the square and  $n$  is the length of the dark square)

Or  $4n + 4$

$① 4(1) + 4 = 8$   
 $② 4(2) + 4 = 12$   
 $③ 4(3) + 4 = 16$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

Handwritten work for part c:

$144 = 12 \times 12$   
 $13 \times 13 = 169$

24 dark squares

$4n = 48$   
 $n = 12$

$4n + 4 = 52$   
 $4n = 48$   
 $n = 12$

$13 \times 4 = 52$

White squares

Total Content Points: 2        (7.EE.A1, 7.EE.B4a)

Total Practice Points: 3        (MP1, MP6, MP8)

The student writes a second expression ( $6x + 42$ ) that can be used to determine the area in Part A, and shows by using properties of operations that the two expressions are equivalent (7.EE.A1). In Part C, the student correctly determines the side length of the dark square by solving an algebraic equation,  $4n + 4$  (7.EE.B4a). The student completes all parts of the problem and makes sense of the problem by interpreting the diagrams, as shown by the student's work in Parts A, B, and C (MP1). The student uses precise calculations to determine the correct side length of the dark square in Part C (MP6). In Part B, the student writes a correct rule ( $4n + 4$ ) to describe the relationship between the side length of the dark square and the number of white tiles in the border (MP8).

Total Awarded Points: 5 out of 5

### Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$$3(2x + 6) + 24 = 3(6 + 2x) + 24$$

$$3(2x) + 3(6) + 24 = 3(6) + 3(2x) + 24$$

$$6x + 18 + 24 = 18 + 6x + 24$$

$$6x + 42 = 42 + 6x$$

OR

original

$6x + 42$

New equation

$42 + 6x$

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

Handwritten work for part b:

$y = mx + b$  (Slope  $m$ , intercept  $b$ )

$\text{White} = 4x + 4$

$x = \text{black}$

$n$	$W$
1	8
2	12
3	16

Slope =  $\frac{4}{1}$  or 4

$0 = 4$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

Handwritten work for part c:

There will be 12 black

$x = \text{black}$  or  $n$

$\text{White} = 4x + 4$

$52 = 4x + 4$

$-4 \quad -4$

$48 = 4x$

$\frac{48}{4} = \frac{4x}{4}$

$12 = x$

Total Content Points: 2                      (7.EE.A1, 7.EE.B4a)

Total Practice Points: 3                      (MP1, MP6, MP8)

The student writes a second expression,  $3(6 + 2x) + 24$ , commutatively equivalent to the first, which can be used to determine the area in Part A. The student also shows, by using properties of operations, that the two expressions are equivalent (7.EE.A1). In Part C, the student correctly determines the side length of the dark square by solving an algebraic equation (7.EE.B4a). The student completes all parts of the problem and makes sense of the problem by writing a correct expression for determining the number of white tiles and using this expression to determine the correct length of the dark square when the border has 52 white tiles (MP1). The student uses precise calculations in Part C to determine the correct side length of the dark square when the border has 52 white tiles (MP6). In Part B, the student writes a correct rule ( $4x + 4$ ) to describe the relationship between the side length of the dark square and the number of white tiles in the border (MP8).

Total Awarded Points: 5 out of 5

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$(6x + 18) + 24$

$x$	$y_1$	$y_2$
1	36	36
2	42	42
3	48	48
4	54	54
5	60	60
6	66	66

### Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

  $y = 4n + 4$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

 
$$\begin{array}{r} 52 = 4n + 4 \\ -4 \quad -4 \\ \hline 48 = \frac{4n}{4} \\ \frac{48}{4} \quad \frac{4n}{4} \\ \hline 12 = n \end{array}$$

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$$6x + 18 + 24$$

If you distribute Alicia's mom's equation, you would get this equation

$$3(2x + 6) + 24 = 6x + 18 + 24$$

$$6x + 18 + 24 = 6x + 18 + 24$$

all solutions

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

$b + 7 = n$

If you add 7 to each of the tiles onto the black ones, you will get the number of white tiles surrounding it.

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

$$\begin{array}{r} 52 \\ - 7 \\ \hline 45 \end{array}$$

There would be 45 tiles that are black in the middle of the black tiles.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway

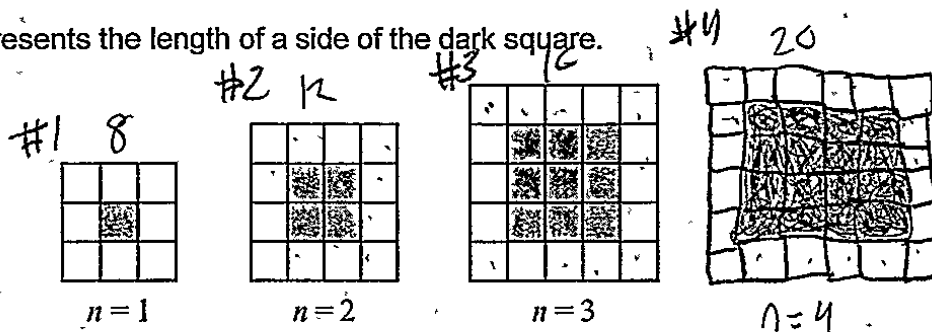

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

 $3(2x + 6) + 24 = 4$ $6x + 18 + 24 = 4$ $6x + 42 = 4$ $\frac{6x}{6} = \frac{42}{6}$ $x = 7$	$3(x + 6 + x) + 24$ $3x + 18 + 3x + 24 = 4$ $6x + 18 + 24 = 4$ $6x + 42 = 4$ $\frac{6x}{6} = \frac{42}{6}$ $x = 7$ <p>Both expressions lead up to equaling <math>x = 7</math></p>
---	---

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

  $(n+4) \cdot 4 =$

#1  $1 \cdot 4 = 4 + 4 = 8$

#2  $2 \cdot 4 = 8 + 4 = 12$

#3  $3 \cdot 4 = 12 + 4 = 16$

#4  $4 \cdot 4 = 16 + 4 = 20$

They all match up with the number  $n$  with this equation

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work

  $52 - 4 = 48 \div 4 = 12$   $(n \cdot 4) + 4 \rightarrow (52 - 4) \div 4$

the length of the dark squares would be 12

Litho#: 00367200109

Anchor 5

Litho 00367200109

Total Content Points: 1 (7.EE.B4a)

Total Practice Points: 2 (MP1, MP8)

The student writes an equivalent second expression in Part A and attempts to show, using properties of operations, that the two expressions are equivalent. The student attempted to set both equations equal to 0 and solve for  $x$ . However, this is not a valid strategy to prove that equations are equivalent. Additionally, the equations were solved incorrectly, and the answer should have been  $-7$  (no credit for 7.EE.A1). In Part C, the student determines the side length of the dark square by solving an algebraic expression,  $(52 - 4) \div 4$  (7.EE.B4a). The student completes all parts of the problem and makes sense of the problem by interpreting the diagrams in Parts B and C (MP1). Although the student finds the side length of the dark square when the border has 52 white tiles, not all calculations are precise. The student uses a “running equation” rather than stopping and forming each equation separately. The equation “ $52 - 4 = 48 \div 4 = 12$ ” is imprecise because  $52 - 4$  is equal neither to  $48 \div 4$  nor to 12 (MP6). In Part B, the student writes a correct rule  $[(n \times 4) + 4]$  to describe the relationship between the side length of the dark square and the number of white tiles in the border (MP8).

Total Awarded Points: 3 out of 5

### Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$$3(2x + 6) + 24$$

$$3(8x) + 24$$

$$24x + 24$$

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

$n = 4x$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

There would be 12 blocks

$n=3$  4=tile 20    5=tile 24    6=tile 28  
       tile 16  
 7=tile 32    8=tile 36    9=tile 40    10=tile 44  
 11=tile 48    12=tile 52

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$3(2x+6)+24 = \text{total area}$   
 $\downarrow$   
 $6x+42 = \text{total area}$

The equation that Alicia's mom wrote can be simplified by multiplying the three by the  $2x$  and  $6$ , to get  $6x+18+24$ . You then add  $18$  and  $24$  to get  $6x+42 = \text{total area}$ .

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square

$n = 1$

$n = 2$

$n = 3$

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$

$4n+4$   
 4 x the length of the sides on all the tiles and +4 to equal the number of white tiles.

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

$52 - 4 = 48$   
 $4$

Litho#: 00517200109

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$3(2x + 6) + 24$   
 $6x + 18 + 24$

$6x = 42$   
 $\frac{6x}{6} = \frac{42}{6}$   
 $x = 7$

$3(2 \cdot 7 + 6) + 24$   
 $3(14 + 6) + 24$   
 $3(20) + 24$   
 $60 + 24$   
 $84$

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

Total Content Points: 0

Total Practice Points: 1 (MP8)

The student writes an equivalent second expression,  $3(2x + 6) + (4 \times 6)$ , in Part A, but does not attempt to demonstrate that the two expressions are equivalent (no credit for 7.EE.A1). In Part C, the student attempts to solve the equation from Part B ( $y = n^4 + 4$ ), but substitutes 52 for  $n$  instead of for  $y$ , which yields the answer 212 (no credit for 7.EE.B4a). The student completes most parts of the problem, but in Part A does not attempt to demonstrate that the two expressions are equivalent (no credit for MP1). The student solves the equation in Part B incorrectly, using 52 as the value for  $n$  instead of  $y$  (no credit for MP6). In Part B, the student writes a correct rule ( $y = n^4 + 4$ ) to describe the relationship between the side length of the dark square and the number of white tiles in the border (MP8).

Total Awarded Points: 1 out of 5

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent.

$3(2x + 6) + 24$  is the same as  $6x + 18 + 24$  because you are just using the distributive property with  $3(2x + 6)$ .

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

The student writes a second expression,  $6x + 18 + 24$ , in Part A that can be used to determine the area, and explains using properties of operations that the two expressions are equivalent: “because you are just using the distributive property with  $3(2x + 6)$ ” (7.EE.A1). In Part C, the student does not attempt to determine the side length of the dark square (no credit for 7.EE.B4a). The student does not attempt Parts B and C, thereby not completing all parts of the problem (no credit for MP1). The student does not attempt to calculate the side length of the dark square in part C (no credit for MP6). In Part B, the student does not write a rule to describe the relationship between the side length of the dark square and the number of white tiles in the border (no credit for MP8).

## Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing.

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent

$$\begin{aligned}
 3(2x+6) + 24 &= 2(3x+6) + 18 \\
 6x+6 + 24 &= 6x + 12 + 18 \\
 6x+30 &= 6x + 30
 \end{aligned}$$

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square.

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

Handwritten work for part b:

$2n + 8$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work.

Handwritten work for part c:

$$52 = 2n + 8$$

$$-8$$

$$44 = 2n$$

---

$$22 = n$$

Total Practice Points: 1 (MP1)

The student writes an incorrect second expression,  $2(3x + 6) + 18$ , in Part A and attempts to use properties of operations to demonstrate that the two expressions are equivalent, but solves the first equation incorrectly to match the incorrect second equation (no credit for 7.EE.A1). In Part C, the student attempts to determine the side length of the dark square using the incorrect expression generated in Part B, but solves the equation incorrectly (no credit for 7.EE.B4a). The student completes all parts of the problem and makes sense of the problem by interpreting the diagrams, making reasonable attempts at an algebraic expression and a solution in Parts B and C. In Part B, the student has counted the boxes, and the terms in the expression reflect aspects of the diagrams ( $2n$  matches the dark square of the second diagram, and 8 corresponds to the white tiles in the first diagram) (MP1). The student incorrectly calculates the length of the dark square in Part C using the equation  $52 = 2n + 8$ . The student's answer is  $n = 23$ , but the correct answer is  $n = 22$ , demonstrating a lack of precision (no credit for MP6). In Part B, the student writes an incorrect rule ( $2n + 8$ ) to describe the relationship between the side length of the dark square and the number of white tiles in the border (no credit for MP8).

### Fixing Up the Yard

Alicia and her mom are repairing the 6-foot by 4-foot walkway in front of their house, plus a section of the sidewalk it connects to. The sidewalk section is 3 feet wide, and extends  $x$  feet to each side of the walkway. The dimensions are shown in the drawing

The total area to be repaired can be calculated by adding the areas of the sidewalk section and the walkway.

- a. Alicia's mom writes the expression  $3(2x + 6) + 24$  to represent the area. Write a second expression that can be used to determine the area and show that the two expressions are equivalent

$$3(4x + 6) + 18$$

$$6x + 18 + 24$$

## Fixing Up the Yard

Alicia and her mom also decide to tile the patio in their backyard. They will use square tiles to create a design. Alicia wants to create a design that consists of a dark square surrounded by a border of white tiles.

In the diagrams,  $n$  represents the length of a side of the dark square

- b. Write an expression that can be used to find the number of white tiles bordering a dark square of side length  $n$ .

$$3n + 6 + 14$$

- c. Determine the side length of the dark square when the border has 52 white tiles. Show your work

The border of black tiles would be 86.7

$$52 \div 3 = 17.\bar{3} \times 5 = (86.7) \text{ rounded black tiles}$$

The student writes two expressions, one of which is equivalent to  $3(2x + 6) + 24$ , but does not attempt to demonstrate that the two expressions in Part A are equivalent (no credit for 7.EE.A1). The student attempts to determine the side length of the dark square in Part C with an incorrect process, which is not based on the equation in Part B ( $52 \div 3 = 17.\bar{3} \times 5$ ) (no credit for 7.EE.B4a). The student attempts to make sense of Parts B and C, but does not attempt to demonstrate that the two expressions are equivalent in Part A (no credit for MP1). In Part C, the student shows a lack of precision by using a “running equation”; 52 divided by 3 is equal neither to  $17.\bar{3} \times 5$  nor to 86.7 (no credit for MP6). The student writes an incorrect rule,  $3N + 6 + 14$ , to describe the relationship between the side length of the dark square in Part B and the number of dark tiles in its border (no credit for MP8).
