

<b>Task: Sammy’s Pets</b>		<b>Kindergarten</b>
<p>Sammy has 7 pets. Some are dogs and some are cats.</p> <p>How many dogs and how many cats could Sammy have? Use a drawing and a number sentence (equation) to explain your answer.</p> <p>Choose another way to show how Sammy could have 7 pets if some are dogs and some are cats. Use a drawing and a number sentence (equation) to explain your answer.</p>		
<b>Teacher Notes:</b>		
<p>Cubes or other manipulatives should be available for students to use if needed. <i>Do not give students 7 cubes.</i> Have cubes available and allow students to count the number of cubes needed. A part-part-whole map may be helpful for some students to recognize that 7 cubes should be decomposed into two groups and that the two groups have a total of 7 pets. The term “number sentence” is used instead of “equation”. Teachers may choose to model the term “equation” but students may choose to continue to use the term “number sentence”.</p>		
<b>Common Core State Standards for Mathematical Content</b>		<b>Common Core State Standards for Mathematical Practice</b>
<p><b>K.OA.A.1</b> Represent addition and subtraction with objects, fingers, mental images, drawings<sup>2</sup>, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.</p> <p><b>K.OA.A.3</b> Decompose numbers less than or equal to 10 into pairs in more than one way, e.g., by using objects or drawings, and record each decomposition by a drawing or equation (e.g., <math>5 = 2 + 3</math> and <math>5 = 4 + 1</math>).</p> <p><sup>2</sup> Drawings need not show details, but should show the mathematics in the problem.</p>		<ol style="list-style-type: none"> <li>1. Make sense of problems and persevere in solving them.</li> <li>2. Reason abstractly and quantitatively.</li> <li>3. Construct viable arguments and critique the reasoning of others.</li> <li>4. Model with mathematics.</li> <li>5. Use appropriate tools strategically.</li> <li>6. Attend to precision.</li> <li>7. Look for and make use of structure.</li> <li>8. Look for and express regularity in repeated reasoning.</li> </ol>
<b>Essential Understandings</b>		
<ul style="list-style-type: none"> <li>• A quantity can be decomposed into two parts in more than one way.</li> <li>• A quantity can be decomposed into two parts and the whole quantity remains the same. The decomposition may be recorded as an addition equation.</li> </ul>		
<b>Explore Phase</b>		
<b>Possible Solution Paths</b>		<b>Assessing and Advancing Questions</b>
<p>Direct modeling with manipulatives:</p> <p>Student counts 7 objects and divides the objects into two groups – one to represent dogs and one to represent cats. (A part-part-</p>		<p>Assessing Questions</p> <ul style="list-style-type: none"> <li>• Which group of cubes represents the number of dogs and which represents the number of cats?</li> <li>• Why did you start with 7 cubes?</li> </ul>

<p>whole map may be helpful for some students.)</p>	<ul style="list-style-type: none"> <li>Describe how you found the answer to the problem.</li> </ul> <p>Advancing Questions</p> <ul style="list-style-type: none"> <li>What are other solutions to this problem?</li> <li>Is it possible for Sammy to have the same number of cats and dogs? Why or why not?</li> </ul>
<p>Counting on from a number less than 7:</p> <p>Student chooses a number less than 7 to represent the number of dogs and then counts on to determine the number of cats needed to make a total of seven pets.</p> <p>Possible representations may include objects or number lines.</p>	<p>Assessing Questions</p> <ul style="list-style-type: none"> <li>Describe how you found the answer to the problem.</li> <li>Why did you start with a number less than 7?</li> </ul> <p>Advancing Questions</p> <ul style="list-style-type: none"> <li>What are other solutions to this problem?</li> <li>Is it possible for Sammy to have the same number of cats and dogs? Why or why not?</li> </ul>
<p>Known Addition Combinations</p> <p>Student chooses a known combination for seven and recognizes that each addend could represent the number of cats or dogs.</p> <p>Examples could include:  <math>1 + 6 = 7</math> so Sammy has 1 dog and 6 cats  <math>1 + 6 = 7</math> so Sammy has 1 cat and 6 dogs  <math>2 + 5 = 7</math> so Sammy has 2 dogs and 5 cats</p>	<p>Assessing Questions</p> <ul style="list-style-type: none"> <li>Describe how you found the answer to the problem.</li> <li>I notice that you said Sammy could have 1 dog and 6 cats or 6 cats and 1 dog. These use the same numbers. Describe how they are different.</li> </ul> <p>Advancing Questions</p> <ul style="list-style-type: none"> <li>What are other solutions to this problem?</li> <li>Is it possible for Sammy to have the same number of cats and dogs? Why or why not?</li> </ul>
<b>Possible Student Misconceptions</b>	
<p>Student inaccurately counts the number of cubes in each set or inaccurately counts when adding up to 7.</p>	<p>Do the number of dogs and cats equal 7? How do you know? Do you think it is possible for Sammy to have 8 dogs? Why or why not?</p>
<p>Student decomposes the 7 into more than two parts.</p>	<p>What does each number represent? How could we represent dogs and cats with the cubes? (Perhaps use two colors, etc.)</p>
<b>Entry/Extensions</b>	
<p>If students can't get started....</p>	<p>Tell me what you know about Sammy's pets. Show me with cubes the number of pets that Sammy has.</p>
<p>If students finish early....</p>	<p>What is greatest number of dogs or cats that Sammy could have if Sammy has both cats and dogs? How can the equation <math>5 + 2 = 7</math> represent two different solutions? What are all of the possible solutions to this problem and how do you know you have found all solutions?</p>

**Discuss/Analyze****Whole Group Questions**

How can the seven be decomposed into two groups in more than one way?

Describe a number sentence (equation) that could be used to show how 7 can be decomposed into 2 parts.

Describe the relationship between the number sentence and number of pets Sammy has.

# Sammy's Pets Task

Sammy has 7 pets. Some are dogs and some are cats.

How many dogs and how many cats could Sammy have?

Use a drawing and a number sentence to explain your answer.

Choose another way to show how Sammy could have 7 pets if some are dogs and some are cats?

Use a drawing and a number sentence to explain your answer.
